

Abstract of the Disclosure

A method, apparatus and computer program product are provided for implementing web based document printing. A print index is obtained. User selected uniform resource locators (URLs) in the print index are identified. The URLs in the print index are sequentially printed. The print index stores a list of user selected uniform resource locators (URLs) to be printed. A web based printing program utilizes the stored print index for printing a document including the list of user selected uniform resource locators (URLs).
